

INFORMATION OPEN HOUSE

RE: LITTLE DOVER WATER STUDY

The Municipality of the District of Guysborough (MODG) has contracted the engineering firm WSP to complete a study of the current groundwater usage to determine both quality and quantity within the community of Little Dover. A well testing program, in conjunction with an in-depth hydrogeological study will be completed to help support the study, as well as cost estimates for potential solutions. The Municipality has completed various studies within MODG in the past on both water and wastewater for all residents. This study area will comprise all the areas from the intersection at Little Dover Road and Hazel Hill on Route 16 to and including the community of Little Dover.

This information session will give residents the opportunity to ask questions and will also be asked to provide as much information as possible to WSP. Questionnaires will be available at the session as well as assistance in filling them out.

Residents of Little Dover are invited to attend an informal open house hosted by WSP to ask questions and learn more about the study.

ST. AGNES PARISH CENTRE, 905 DOVER ROAD

THURSDAY, OCTOBER 9th, 2025

6:00 PM - 7:00 PM
